The unknown function is generally represented by a variable (often denoted  $y$ ), which, therefore, depends on  $x$ . Thus  $x$  is often called the independent variable of the equation. The term "ordinary" is used in contrast with the term ...Differential equation Wikipedia An ordinary differential equation ODE is an equation containing an unknown function of one real or complex variable  $x$  its derivatives and some given functions of  $x$  The unknown function is generally represented by a variable often denoted  $y$  which therefore depends on  $x$  Thus  $x$  is often called the independent variable of the equation The term ordinary is used in contrast with the term Ordinary differential equation Wikipedia In mathematics an ordinary differential equation ODE is a differential equation containing one or more functions of one independent variable and the derivatives of those functions The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable
